## **EDUCATION**

**The Ohio State University | Columbus, OH | Aug.2021-May.2025**

Bachelor of Science, Computer Science & Engineering

- GPA: 3.6/4.0, Cum Laude;
- Selected 5 times on College of Engineering Dean's List

**University of Illinois Urbana-Champaign | Champaign, IL | Aug.2025-May.2027**

Master of Computer Science

- GPA: 4.0/4.0

## **TECHNICAL SKILLS**

- Programming Languages: Java, Python, C, C++, C#, Kotlin, SQL, JavaScript, Assembly, HTML
- Tools/Frameworks: Android Studio, Git, Unity, Firebase, Linux, SQLite, React.js, Node.js
- Concepts: Mobile app dev, Info Security, Machine Learning, Relational database, Data Structure & Algorithms, Web Development, Version Control, Object Oriented Programming, Game Dev, Software development, UI Design, Test-driven development

## **WORK EXPERIENCE**

**PC Game Developer Intern | Resilience, Inc | Apr.2024-Jun.2025**

- Designed and implemented 2D and 3D gameplay systems in Unity using C#, including player controls, physics interactions, and UI features, enhancing overall game functionality and user experience
- Collaborated with a cross-functional team of 8 developers, integrating gameplay scripts while maintaining code quality through version control and peer reviews
- Applied agile methodologies with sprints and stand-ups, reducing bug resolution time and accelerating feature delivery

**Teaching Assistant | The Ohio State University, College of Engineering | Aug.2024 - May.2025**

- Worked in a junior/senior-level class focusing on computer animation and video games
- Assisted 180+ students in Unity & C# projects, clarifying technical concepts and debugging issues
- Facilitated communication between students and teaching staff, strengthening collaboration

## **PROJECTS**

### **ProdApp**

- Developed a productivity app in Kotlin and Java using Android Studio, featuring task creation, and progress tracking
- Integrated SQLite/Room database to store and manage user tasks persistently with efficient CRUD operations
- Optimized app performance by leveraging RecyclerView, ViewModel, and LiveData for smooth task updates

### **Linux Command Logbook**

- Developed a Linux-based command logbook in C to capture and manage user commands for tracking and re-execution
- Implemented multi-process and multi-threaded programming with system signal handling to optimize performance
- Designed and integrated data structures to support fast command storage, retrieval, and execution

### **Travel Map**

- Built a web app with JavaScript and Leaflet API to visualize travel routes, transportation modes, and carbon emissions
- Enabled sustainability insights by calculating CO<sub>2</sub> impact of travel patterns

### **Network-based List Manager**

- Built a Python-based networked list manager with server-hosted storage, enabling clients to access and edit shared lists
- Written in Python, simulated TCP/IP networking in a small scale, enhancing understanding in relative topics
- Implemented features that imitates concepts including three-way handshake, server-side prerequisite checking, client-side error detection

## **EXTRACURRICULAR ACTIVITIES**

### **Hack OH/O Hackathon**

- Collaborated in a 24-hour hackathon to develop Travel Map, receiving positive feedback for innovation and usability
